

Mega Mountain Could Be Your Next Data Center

Available Limestone Mine, CR 1294 and Mushroom Road, Lawton KY

Unique underground data center development currently available

THE RUNDOWN

Square Feet: 2,600,000 SF

Interior: 80 acres

Exterior: 186 acres

Power: 10 MW power available near term from AEP Transmission

Temperature: 54° F-56° F year-round

Fiber: Windstream fiber available

» Mega Mountain Data Center

Now available, Mega Mountain's huge, 60 acre unique interior space is the result of years of uniform mining of limestone. Its open space consists of long crisscross aisles approximately 32' wide and 27' high from the level stone floor to the level stone ceiling. These aisles crisscross each other in a checker board grid pattern particularly suitable for a data center facility. The exterior plateau, at mine floor entry level, is large enough for buildings and needed parking. There are presently four new foundations with partial cement block walls started on the plateau.
